RELEASED: July 2, 2001 3 P.M., CT

VOL. 22, NO. 18

#### Agricultural Summary

Wheat harvest continued to move rapidly across the state last week with only minor delays caused by widely scattered showers. Wheat harvest was 80 percent complete as of July 1 compared to 66 percent last year at this time and the average of 50 percent. The wheat crop was reported to be short in height which could lessen the availablity of wheat straw for livestock operations. Farmers were wrapping up their double crop soybean planting in the south as quick as the wheat crop was harvested. Spraying for weeds in soybeans and some late planted corn continued. As the corn crop enters its critical pollination period farmers are hoping for a few rain showers and some cool weather to develop. disease problems are very minimal at this time. Fruit and vegetable growers were harvesting their first crops for roadside stands such as green beans, peaches and sweet corn. Condition of the soybean and corn crops declined slightly this past week as drier soils became more common after a week with very little rainfall. Farmers were also busy last week mowing and spraying roadsides and waterways, baling hay, completing paperwork at their local FSA and hauling the end of last years crop to market.
